IN THE CLAIMS:

Claims 1-24 (Canceled)

25. (Currently Amended) An integrated circuit, comprising: transistors;

interconnects formed in dielectric layers located over the transistors that interconnect the transistors to form an operative integrated circuit; and

a thin film resistor device interconnected to the transistors, including:

a resistive layer located on a first dielectric layer;

first and second contact pads located atop the resistive layer; and

a second dielectric layer located directly on the resistive layer and directly on a top

surface of the first and second contact pads.

- 26. (Original) The integrated circuit as recited in Claim 25 further including a first interconnect that contacts the first contact pad and a second interconnect that contacts the second contact pad.
- 27. (Original) The integrated circuit as recited in Claim 26 further including interconnect metallization structures wherein the first dielectric layer is located between the interconnect metallization structure and the resistive layer.
 - 28. (Original) The integrated circuit as recited in Claim 27 wherein each of the first

and second interconnects contact an interconnect metallization structure.

- 29. (Original) The integrated circuit as recited in Claim 26 wherein the first and second contact pads each have a width that is about 3000 nm greater than a width of at least one of the first and second interconnects.
- 30. (Original) The integrated circuit as recited in Claim 26 wherein the first and second interconnects comprise aluminum.
- 31. (Original) The integrated circuit as recited in Claim 30 wherein the first and second interconnects comprise a titanium/titanium nitride/aluminum/titanium nitride stack.
- 32. (Original) The integrated circuit as recited in Claim 25 wherein the resistive layer includes tantalum nitride.
- 33. (Original) The integrated circuit as recited in Claim 32 wherein the resistive layer further includes tantalum pentoxide.
- 34. (Original) The integrated circuit as recited in Claim 25 wherein the first and second contact pads comprise a titanium/platinum stack.

- 35. (Original) The integrated circuit as recited in Claim 34 wherein the titanium/platinum stack includes titanium nitride located there between.
- 36. (Original) The integrated circuit as recited in Claim 25 wherein the resistive layer has a thickness ranging from about 20 nm to about 80 nm.
- 37. (Original) The integrated circuit as recited in Claim 25 wherein the transistors form part of a complementary metal oxide semiconductor (CMOS) device, bipolar device or BiCMOS device.
